

## IMPORTANT SET LIBRARIES!!!

You do not need to download any additional libraries.

however if it requires a change in the file EthernetUdp.h

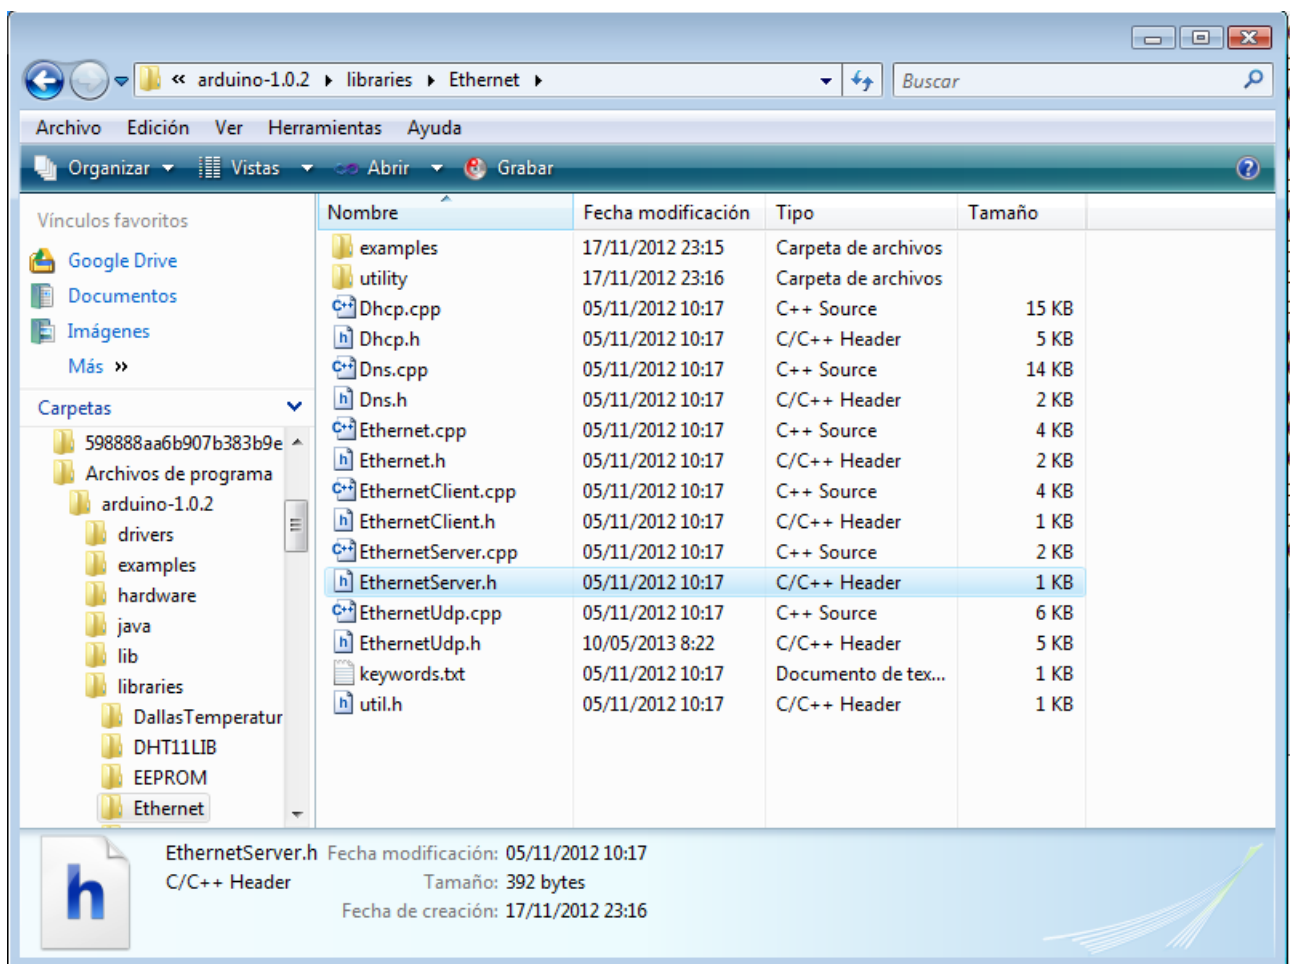

This modification is necessary because EthernetUdp has a default maximum size of 24 bytes for packets.

For the system to work fully you need to increase this value to 340, let's see how we do this:

EthernetUdp.h Open file, find this file in ARDUINO program folder.

Once inside this folder the path would be:

Libraries \ Ethernet \ EthernetUdp.h.

After opening the file look for the line where it says:

```
# define UDP_TX_PACKET_MAX_SIZE 24
```

and modified by:

```
# define UDP_TX_PACKET_MAX_SIZE 340
```

We save file and ready
